

Name of intervention:
Nessy - Dyslexia intervention.

Intent: To enable children to increase their knowledge and confidence in reading and spelling. This is done by working through a program that sets individual achievable targets at the child's ability level.

Implementation: Children will have a minimum of one-half hour session per week in a group of no more than four. On occasions the children may be asked to complete some tasks at home to consolidate their learning.

Impact: Entry and exit data will be gathered to assess the impact of the Nessy program. We should see an improvement in the child's confidence and self-esteem as they begin to learn and understand spelling rules and techniques for independent reading and comprehension skills.
