

Name of intervention:
SNIP- Dyslexia intervention.
Specialist intervention designed
for children with Dyslexia

Intent: To enable children to increase their knowledge and confidence when using rapid recall for word recognition and spelling. It also encourages eye muscle movement and muscle memory.

Implementation: Kath will work with SENCO and class teachers to identify children who would benefit from this support. All children selected will be given a pre-determined pack to work through at their own pace. This should be done daily for 20 minutes.

Impact: There is no entry and exit data for this intervention, but the children who access SNIP will also have allocated time on Nessy where progress is tracked.

Lead by: Kath Hartshorn
